What's Going on at Suncor Stainless?

Ready for Launch

Suncor Introduces a New and Improved Website

Suncor Stainless is excited to announce the launch of our new and improved website. Our main goal with the new website is to provide our current and prospective customers with the most accurate and current stainless steel product information while sharing our knowledge and expertise of the stainless steel industry, product development and innovation.

The new website features improved navigation and a handful of features which will make the overall experience more impactful on any type of device. Amongst the new features, the site utilizes an advanced product search that enables visitors to sort through thousands of product selections and options. Visitors can use the filters, by using drop-down menus, to find products that only meet the criteria that they are filtering for. Ultimately, this will allow our customers to quickly find products with the features or specifications that they require.

The site also introduces new and expanded product specifications. All Suncor products recently had their specifications reviewed and expanded on and we are proud to say that we offer one of the most detailed product specification catalogs in the industry.

Product feature icons have also been added to each product page allowing visitors to quickly identify the key features associated with each Suncor product.

We will be regularly updating our content with helpful information, news, announcements, press releases and white papers on the Blog, Product Information and Support, and News and Events pages.

We hope you enjoy the new website and that it is a valuable resource for your stainless steel product and information needs.

PRODUCT SPOTLIGHT

Hammerlock Links

When High Strength is Essential

Suncor's Hammerlock Links are the only choice when high strength is essential to your application. Hammerlock Links are used to attach chain to master links or to install new body chain in old slings. Suncor's Hammerlock Links are strong, dependable and make on the job installation fast and easy. The Hammerlock Links are drop forged and load rated. They are available in 3/16", 1/4", 5/16", 3/8", 1/2" and 5/8" sizes and are made from grade 316-NM stainless steel for maximum corrosion resistance and durability. The inner and outer surfaces have a flattened profile and the point where the link halves join is precision machined for a reliable fit and greater movement.

Replacement pin sets are available and include the pin, bushing and roll pin (S0655-KT Series).

NEW PRODUCT SHOWCASE

Wide Handle Ratchet Strap Series

High Quality and Heavy Duty

When hauling cargo or equipment, high quality heavy-duty ratchet assemblies are the only choice to ensure safety and proper load management. Suncor's new Wide Handle Ratchet Strap series accommodates webbing widths of 1", 1.5" and 2". The wide handle series is available with a variety of stainless steel hardware options including Wire Lever Harness Clips, Flat Hooks, J Hooks, S Hooks or Endless. The wide handle ratchets are made from grade 304 stainless steel and feature dual locks, a tight grip and easy adjustment. High quality nylon straps stand up to abrasion and provide optimal weather resistance.

Not all ratchet assemblies are created equal. If your cargo is important to you, be sure to secure it with a high quality, heavy-duty, and long lasting ratchet assembly.

High quality nylon webbing combined with forged 316 stainless steel harness clips

Threaded and Unthreaded Yoke Ends

Larger Sizes Now Available

Suncor's Threaded and Unthreaded Yoke Ends are made from grade 316-NM stainless steel for maximum corrosion resistance and durability. They are ideal for marine and industrial turnbuckle applications to support pivoting movement along one axis when threaded onto shafts, rods, and other assemblies. A new larger 1 inch size has been added to the S0113-RC and S0113-U series. The new part numbers are S0113-RC25 (threaded, UNC) and S0113-U025 (unthreaded).

Galvanized Folding Grapnel Anchors

Available in a Variety of Colors

The Folding Grapnel Anchor is cast iron galvanized and will hold in mud, sand, gravel, and rock. It is designed for the temporary mooring of small boats, sailboats, personal watercraft (PWC), inflatable boats, canoes, and float tubes. It comes complete with one galvanized shackle (G8001 series only), 38 feet of nylon rope spliced to it, an in-line buoy which slides up and down the rope, a stainless steel spring clip at the end and a nylon storage bag. The storage bag means you can neatly stow this anchor system in your PWC or boat, protecting it and your vessel. It fits into most personal watercraft seat compartments. The new color options make the anchors easy to spot in the water.
