FOR IMMEDIATE RELEASE

SUNCOR STAINLESS® EXPANDS TIE-DOWN RING PROGRAM WITH NEW DOUBLE RING SERIES

Plymouth, MA, July 30, 2026 – Suncor Stainless® Inc. is the leading manufacturer for stainless steel hardware in the industrial, marine, government, architectural, OEM, and commercial industries. Suncor Stainless is expanding its new line of stainless-steel tie-down rings with the double ring series, designed to provide durable, corrosion-resistant anchor points for transportation, marine, construction, and industrial applications.

Designed for maximum versatility, the expanded program gives customers the flexibility to create custom, heavy-duty anchor configurations tailored to their exact operational needs. From over-the-road transport fleets, utility trailers, and pickup truck beds to harsh marine decks, construction job sites, agriculture, and OEM machinery platforms, these tie-downs adapt to almost any surface or load requirement.

The addition of the 4-hole model provides enhanced load distribution and maximum holding stability for heavier-duty applications. Manufactured from high-quality 304 stainless steel, all tie-down rings in the program deliver long service life and superior resistance to harsh environments.

"This expansion is about giving customers tie-down solutions they can trust when strength, stability, and corrosion resistance matter most. By adding the double ring series alongside our standard models, we are giving customers more stable, corrosion-resistant solutions that help protect equipment, improve safety, and perform reliably over time, which is what they expect from Suncor Stainless."

- Patrick Striebel, President / CEO

The program includes multiple ring styles and mounting configurations, including D-rings, triangle rings, and rectangle rings, as well as surface-mount and recessed pan options to support a wide range of installation requirements and load securement needs.
